## Description du produit :

Camera dollies are used in professional video productions and filmmaking. With the Prosup Camera Dolly it is possible to make horizontal camera movements smoothly. The film camera is mounted to the dolly to be able to move toward or away from the subject during recording. It is possible to push the dolly back and forward, without taking pains. Designed specifically by PROSUP for the Video / Film maker, who requires mobility with capacity and strength, the laptop dolly succeeds with this requirement. Prosup designed the LapTop Dolly specifically for small Broadcast / Video teams. The dolly is made of CNC engineered aluminium and stainless steel. Cameraman can mount the E-Jib onto the Dolly. The original dolly size is 90x70cm (35.5x27.5?) and thus it clears any door opening. The ingenious folding mechanism allows the dolly to minimize in size and to fit a Pelicase. The dolly comes with 3 pre-mounted 100mm bowls for low shots. Straight travel shots are secured by a track locking mechanism. The LapTop Dolly can take a camera person with the swivel support or a tripod with the tripod tie downs or a pedestal column via specially made adapters. The turnstile can be mounted to facilitate a swivel of 360° around the centre post. Besides the standard centre position, the swivel support unit can also be mounted offset thus allowing the camera person for additional moving space. The riser sits on the Euro mount of the swivel and comes with a 100mm bowl on the top. Via the 100 to 150mm adapter, bigger fluid heads can also be mounted. The riser and the seat can be extended and

locked to the most convenient position. Pedestal Columns Removable columns of the most popular pedestals can also be fitted on the LapTop Dolly. The necessary adapters and receptacles are available in the Prosup accessory range. Thus the dolly is a great solution for any OB work with difficult floor conditions. The packing concept of the LapTop Dolly is really unique. On three levels all necessary accessories can be stored away: Bottom: air tyre set and tie downs for rock-solid lock of a tripod to the dolly Middle: track wheel set for straight and curved tracks, push bar to be mounted on either side of the dolly, steering lock for track mode and straight ahead travel, space for Euro mount and air pump Top: the folded LapTop Dolly platform Fully loaded and including the case the unit comes to over 40kg (90lbs) while the dolly itself weighs in with a mere 15kg (33lbs)
