Description du produit :

The 5-axis diopter holder is ready to use on 15 mm rails. It allows you to enhance your creativity and enables you to shoot that previously impossible shot with adjusted and / or multiple focus planes.

The 5-axis diopter holder gives you the possibility to adjust the pitch, roll, yaw, vertical and horizontal shift. These axes can be changed independently and run through the optical axis, which means the diopter's position to the lens will not change while tilted, rolled or rotated. So the Vocas 5-axes diopter holder will not interfere with your creativity!

The diopter holder allows any round 138 mm diopter and, due to its flexible cuff, will fit any lens perfect while preventing stray light. For additional accessories, for example a flexible flag, an interchangeable (1/4" or 3/8 ") threaded hole is available which is located at the top of the diopter holder.
